Print then Cut feature

You can use the Print then cut feature of A3 printable vinyl to make a variety of projects. It works by readir
black outline of your project and cutting it out. However, you should make sure to leave enough room betw
images for the cut process. A bleed is a small border around each image that prevents the white edge fror
through. Otherwise, the printed image will look fuzzy around the edges.

The Cricut Print then Cut feature works with a variety of materials. Some of the easiest materials to use wi
then Cut are paper and cardstock. They are ideal for creating greeting cards and gift tags. The Cricut Make
machines work with both white and light-colored materials. You can print any pattern or color on them. For
who want to cut vinyl, there is an option that works with both Cricut Explore and Cricut Maker machines.
Another way to use printable vinyl is to print your design on a home printer. If you're using an old mat, it's
recommended to use a brayer to prevent the vinyl from curling. Next, you'll need to place your printed stick
in the upper left corner of your Cricut mat. Alternatively, you can use a brayer to get a better result. You'll a
to change your Design Space settings to A3 printable vinyl.
If you're using a Cricut Design Space or Cricut Access, the Print then Cut feature requires you to perform a
calibration. This ensures that your cuts are around the edges of your printed image and not offset. The prir
feature requires a desktop computer or iOS app. The Android app doesn't support this feature yet. After loc
you'll be prompted to print a calibration sheet. Once you've printed the calibration sheet, place it on your C
and press the button. Then, you're done!
